

# FieldTurf Recycling

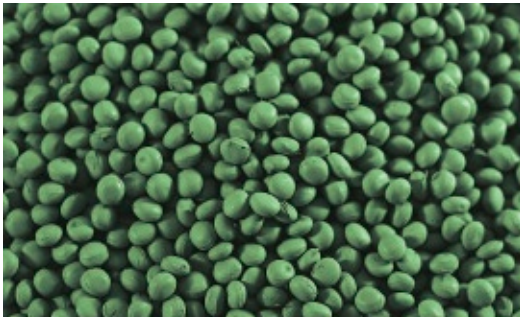

## From Cradle To Cradle

Field Removal

Grinding

Pelletizing

**When it comes to carbon footprints, there's simply no comparison**

By choosing FieldTurf artificial turf, you're becoming part of a company that leads the artificial turf industry in recycling artificial turf fields and the environmental technology associated with the process. FieldTurf is 100% recyclable.

FieldTurf uses more recycled content than any other company when producing artificial turf fields and recycles more product at the end of a field's life than all of its competitors. FieldTurf has developed a patented removal and recycling method to better serve our 4,000+ clients in North America.

**FieldTurf is the greenest product in the industry, from conception through to completion.**

When a FieldTurf installation finally comes to the end of its long life – it continues to help our planet. FieldTurf was the first company in the industry to remove entire artificial turf systems and recycle them. FieldTurf systems have already become “new” materials for many applications including:

- School bags
- Batting cages
- Barn mats
- Top dressing for natural grass
- Lining for highway barrels and backing for road bases
- Tote bags
- T-shirts

FieldTurf recycles materials into a playing surface that is artificially intelligent and environmentally sound.

The world leader in artificial turf is a proud member of the U.S. Green Building Council and the Environmental Protection Agency's 'Greenscapes' program.
